

OBVIOUSLY, THE FACTS GOT LOST IN TRANSLATION.

When you get down to the real facts about the Boeing KC-X NewGen tanker vs. the EADS/Airbus A330 tanker, you get the real story.

- Not one A330 tanker has ever been delivered to any customer anywhere. The Australian A330 tanker pictured in EADS advertising is behind schedule and does not meet all U.S. Air Force requirements.

- Modern Boeing 767-based tankers are already in operational service today. Over the past 60 years, Boeing has delivered more than 2,000 tankers to over a dozen customers worldwide.

- The A330 tanker is designed and manufactured predominantly in four European countries. The Boeing NewGen tanker will be designed and built in the U.S. by a skilled American workforce, supporting 50,000 U.S. jobs in more than 40 states.

America's warfighters and taxpayers deserve the real facts, the real story, the best choice. The Boeing KC-X NewGen Tanker.
